Malibu Kitchen

Hardy Inside shows ultimate style and function with Malibu

French flair is exemplified by one of France's top kitchen manufacturers in their Malibu design which combines superb function, unmatched style and unique innovation.

Hardy Inside, the Rennes-based design and manufacturing specialists, excel in creating total interiors that offer a synergetic blend of lifestyle practicality and aesthetic beauty.

Malibu is a true professional kitchen design combining wall and room-central elements created from the latest materials and incorporating appliances and storage systems.

The highly functional island unit, mounted on a vibrant orange plinth which is matched by an overhead canopy with integral lighting and extraction, combines sheer lines and contrasting material and colours in charcoal grey matrix and aluminium with a re-constituted stone worktop. This eye catching asymmetric unit incorporates dual fridges (for different food types or to separately cool beverages) and on the opposite side an integrated freezer. Above is the sink with ultra-modern mixer tap and clever storage recesses behind the sink for cleaning materials.

The preparation and cooking section of the island unit incorporates a flush hob, preparation area, Teppanyaki, and the ultimate must-have in today's kitchen – a steam oven.

On the mid-height wall units behind the island are recessed dual eye-level ovens and

Ranged to one side of the island is modern angular furniture from Hardy Inside – a starkly geometric yet intriguing wall bench, table and chairs backed by matching open wall shelves which overhang a blackboard for menus, wine lists or recipes.

“Art de Vivre” is a Hardy Inside philosophy that permeates and underpins their spectacular designs. Malibu is just one stunning example.
